

Straight valves VDN1...

Angle valves VEN1...

Radiator Valves

DIN-norm, for 2-pipe heating systems

VDN1...
VEN1...

- Valve bodies made of brass, mat nickel-plated
- DN10, DN15 and DN20
- Integrated presetting of the k_v -values
- Internally and externally threaded (Rp/R) conforming to ISO 7/1
- Manual knob / protective cover included in the delivery
- Can be combined with RTN... thermostatic actuators, SSA... motoric actuators or STA... thermal actuators, STS61 and electronic REH... radiator controllers

Use

The radiator valves are used in hot water heating plants for individual room or zone temperature control and limitation. They are basically recommended in all rooms, especially where heat gains or different temperature levels occur.

Type summary

Type reference straight	Type reference angle	DN	k _v -value [m ³ /h] setting range	k _v -value [m ³ /h] at a P-band of 2 K
VDN110	VEN110	10	0.09 ... 0.63	0.43
VDN115	VEN115	15	0.10 ... 0.89	0.52
VDN120	VEN120	20	0.31 ... 1.41	0.71

Order

When ordering, please give quantity, product name and type reference.

Example: 2 straight valves VDN120

Delivery

Valves and accessories are packed separately.

Equipment combinations

Product	Types	Data sheet
Thermostatic actuators	RTN...	N2111
Electronic radiator controller	REH90	N2131
Motoric actuators	SSA31... / SSA61... / SSA81...	N4893
Thermal actuators	STA21 / STA71	N4877
Thermal actuator	STS61 ¹⁾	N4880

¹⁾ Quasi-proportional control action, not recommended for parallel operation

Function / mechanical design

The flow rate can be preadjusted with an orifice. Full stroke is ensured irrespective of the preadjustment, which is made with the help of the protective cover.

- 1 Manual knob / Protective cover
- 2 Sealing gland
- 3 Valve insert
- 4 O-ring
- 5 Reset spring
- 6 Orifice

Features and benefits

- The valves conform to EN 215
- The sealing gland can be replaced while the plant is under pressure (no tools required)

AVN1
Sealing gland

ATN2
Protection against dismantling

ATN3
Manual knob (RAL9016)

AVN...
Compression fittings

Engineering notes

The reference numbers for preadjustment are given in the table with the k_v -values (see page 4) and in the valve sizing charts (see pages 5 – 6).

1. Calculate the volumetric water flow \dot{V}_{100}

$$\dot{V}_{100} = \frac{Q_{100}}{1.163 \times \Delta T \times f_1} \text{ [m}^3\text{/h]}$$

Q_{100} = heat demand [kW]
 ΔT = temperature differential [K]
 1.163 = constant of water
 f_1 = correction factor = 1 for water

2. Define the pressure drop Δp_{v100} across the fully open valve
 In most types of plant, a differential pressure Δp_{v100} of 0.05 to 0.2 bar is adequate.

3. Calculation of the nominal flow value k_v

$$k_v = \frac{\dot{V}_{100}}{\sqrt{\Delta p_{v100}}} \text{ [m}^3\text{/h]}$$

Δp_{v100} = differential pressure across the valve [bar]

Example:

Heat demand	Q_{100}	= 1.2 kW
Temperature differential	ΔT	= 20 K
Water volume	$\dot{V}_{100} = \frac{1.2}{1.163 \times 20}$	= 0.052 m ³ /h = 52 l/h
Required differential pressure across the valve	Δp_{v100}	= 0.1 bar
Flow	$k_v = \frac{0.052}{\sqrt{0.1}}$	= 0.17 m ³ /h

Solution

According to the chart (refer to « Valve sizing charts», or table with k_v -values), the preadjustment required by a VDN110 3/8" valve is 2.

Tips

- Noiseless operation is ensured by a pump that provides no more pressure than is needed to transport the required amount of water.
- To keep the valve free from dirt particles, it is recommended to install a strainer.

k_v-values

The k_v value gives the volumetric water flow \dot{V}_{100} in m³/h at a pressure drop Δp_{v100} across the valve of 1 bar.

k_v-values [m³/h] at the different preadjusted positions

Control range with SSA..., STA... actuators and STS 61	✓	✓	✓	✓	✓	✓	✗
Control range of thermostatic actuators RTN...	✓	✓	✓	✓	✓	✗	✓
Reference numbers for preadjustment	1	2	3	4	5	N	N¹⁾
VDN110 / VEN110	0.09	0.18	0.26	0.33	0.48	0.63	0.43
VDN115 / VEN115	0.10	0.20	0.31	0.45	0.69	0.89	0.52
VDN120 / VEN120	0.31	0.41	0.54	0.83	0.91	1.41	0.71

¹⁾ k_v-value at a P-band of 2 K

Setting the k_v-value

The k_v-values can be set on the valve's head in 5 steps + N (fully open) using the protective cover, which can be turned through 180°.

Observe marking on the valve's outlet side!

Notes

Mounting

- Mounting Instructions are printed on the package
- The valves are supplied preadjusted to N (fully open)
- To ensure correct functioning of the thermostatic heads and electronic actuators, observe the available mounting choices and mounting conditions

Orientation

Maintenance

The valves are maintenance-free.

Repair

In the event of leakage, the valve's sealing gland can be replaced.
The valves cannot be repaired; the complete unit must be replaced.

Disposal

The valve must not be disposed of together with domestic waste.
Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view.

Current local legislation must be observed.

Warranty

Application-related technical data are only warranted when used in connection with the Siemens controllers and actuators listed under «Equipment combinations».

When using the radiator valves with actuators of other manufacture, any warranty by Siemens Switzerland Ltd / HVAC Products becomes void.

Technical data

Functional data	PN class	PN 10		
	Suitable media	cold and hot water, water-glycol mixtures; recommendation: water treatment to VDI 2035		
	Medium temperature	1...120 °C		
	Perm. operating pressure	1000 kPa (10 bar)		
	Differential pressure Δp_{\max}	max. 60 kPa (0.6 bar)		
	Differential pressure Δp_{v100}	5...20 kPa (0.05...0.2 bar): recommended range		
	Stroke	min 1.2 mm		
Materials	Valve body	brass, mat nickel-plated		
	Fitting	brass, mat nickel-plated		
	Protective cover	polypropylene		
	O-ring	EPDM
